[Mphasis Stelligent Launches Enterprise Account Factory Solution for AWS Accounts](#)

Mphasis (BSE: 526299; NSE: MPHASIS), an information technology (IT) solutions provider specializing in cloud and cognitive services, today announced the launch of Enterprise Account Factory, a Built on Tower Control (BoTC) solution on AWS Control Tower. An Amazon Web Services (AWS) Premier Partner since 2020, this is Mphasis Stelligent's first solution as an AWS Control Tower Partner and AWS Management and Governance Lens (M&G Lens) Partner.

The Enterprise Account Factory delivers the capability for DevOps teams to develop validated and standardized AWS Account products that enforce quality, security, and governance. Product and development teams will be able to deploy validated AWS Accounts on demand with the confidence that they meet enterprise operational standards. With Enterprise Account Factory, enterprises will be able to meet the need to deliver hundreds or even thousands of distinct applications, each with their own AWS Account.

As a BoTC solution, Enterprise Account Factory extends the current customization capabilities of AWS Control Tower by adding the ability to define complex sets of controls and guardrails and enforce them through the deployment pipeline. The service is fully integrated with AWS Control Tower, providing a workflow for easy creation and modification of accounts.

"By using Enterprise Account Factory, developers can be confident that AWS Accounts will be operational from day one," said Nitin Rakesh, CEO of Mphasis. "The Mphasis Stelligent solution makes it easy for all provisioned accounts to meet enterprise standards, operate within cost and usage guardrails, and scale whenever necessary."
