MphasiS-Wyde has officially unveiled Wynsure v4.7, an end-to-end multi-line insurance platform designed to manage multiple lines of business including group, individual, property & casualty, health and mortgage insurance.

MphasiS-Wyde for Americas CEO Larry Erb said, "Since the introduction of our platform, many of our customers have been awaiting a solution that can support multiple product lines on a single platform improving business efficiencies."

Wynsure v4.7 release involves several enhancements which include improved user interface and experience, performance, implementation efficiency and maintenance.

Insurance carriers can quickly process enrollment, billing and claims using the new software, while supporting large volumes of data and transactions across multiple lines.

According to the solution provider, Wynsure is a multi-language, multi-currency, easily customizable software product that offers policy administration, claims and billing solutions across Life & Annuities (L&A), disability, health, and Property & Casualty (P&C).

Wyde Corporation and the Wynsure platform were acquired by MphasiS in 2011, to provide large and mid-market insurance carriers across the US, France and Canada multi-line capabilities.
