The partnership expands AI-driven cybersecurity offerings built on Microsoft Security technologies, strengthening threat detection, response and enterprise protection

Mphasis, an AI-led technology solutions company, on Monday said that it has joined the Microsoft Intelligent Security Association (MISA), an ecosystem of software development companies and security partners integrated with Microsoft Security technologies.

“Mphasis' inclusion in the Microsoft Intelligent Security Association reflects its deep alignment with Microsoft Security platforms and our expertise in delivering AI-driven, data-centric and automation-first cybersecurity solutions. We are committed to delivering innovative cybersecurity solutions and services that protect enterprises and transform how they manage and mitigate modern-day cyber risks,” said Srikumar Ramanathan, Chief Solutions Officer, Mphasis.

The collaboration builds on Mphasis' managed security services, Cyber Fusion Centre services, and consulting and advisory offerings built around Microsoft technologies, including Microsoft Sentinel, Microsoft Entra, Microsoft Intune, Microsoft Purview, Microsoft Defender and Microsoft 365 Copilot.

According to the official press release, its managed security services, available on Microsoft Marketplace, combine Microsoft's AI-powered security technologies with Mphasis' cybersecurity expertise and AI accelerators to help enterprises detect, investigate and respond to cyber threats across endpoints, identities, data, cloud applications and infrastructure.

“The Microsoft Intelligent Security Association has grown into a vibrant ecosystem of trusted security vendors across the globe. Our members, like Mphasis, share Microsoft's commitment to collaboration within the cybersecurity community to improve customers' ability to predict, detect and respond to security threats faster,” said Maria Thomson, Director, Microsoft Intelligent Security Association.

Mphasis Joins Microsoft Security Partner Ecosystem Amid Rising Cyber Threats

Mphasis said the membership builds on its existing collaboration with Microsoft across managed security services, cyber fusion centres and advisory offerings, as enterprises step up investments in AI-driven cyber defence.

Mphasis has joined the Microsoft Intelligent Security Association (MISA), a partner ecosystem comprising software vendors and security service providers that integrate with Microsoft's security technologies, as the IT services company looks to strengthen its cybersecurity offerings amid rising enterprise demand for AI-powered security solutions.

The Bengaluru-headquartered company said the membership expands its collaboration with Microsoft across managed security services, Cyber Fusion Center services, and consulting and advisory offerings built on Microsoft's security portfolio, including Microsoft Sentinel, Entra, Intune, Purview, Defender and Microsoft 365 Copilot.

According to Mphasis, its managed security services, available through Microsoft's marketplace, combine Microsoft's security stack with the company's AI-based accelerators to help enterprises detect, investigate and respond to cyber threats across endpoints, identities, cloud applications, infrastructure and data.

Srikumar Ramanathan, Chief Solutions Officer at Mphasis, said the association reflects the company's alignment with Microsoft's security platforms and its focus on AI-driven, automation-first cybersecurity services.

"We are committed to delivering innovative cybersecurity solutions and services that protect enterprises and transform how they manage and mitigate modern-day cyber risks and enable our clients to confidently achieve their core business objectives," Ramanathan said in a statement.

MISA, established by Microsoft in 2018, brings together security technology vendors and service partners to build integrated cybersecurity solutions that help organisations improve threat detection and response.

Microsoft said members collaborate to strengthen security capabilities for customers facing an increasingly complex threat landscape.

"The Microsoft Intelligent Security Association has grown into a vibrant ecosystem comprised of the most reliable and trusted security vendors across the globe. Our members, like Mphasis, share Microsoft's commitment to collaboration within the cybersecurity community to improve our customers' ability to predict, detect, and respond to security threats faster," said Maria Thomson, Director, Microsoft Intelligent Security Association.

Media Brief

[Mphasis joins Microsoft Intelligent Security Association ecosystem](#)

Mphasis, a platform-driven technology solutions provider, announces that it has become a member of the Microsoft Intelligent Security Association (MISA), an ecosystem of software development companies and security services partners that have integrated their solutions with Microsoft Security technology to better defend their mutual customers against cyber threats.

This milestone builds on the collaboration between Mphasis and Microsoft through its Managed Security Services, Cyber Fusion Center (CFC) Services and Consulting and Advisory Services built around Microsoft Technologies, including Microsoft Sentinel, Microsoft Entra, Microsoft Intune, Microsoft Purview, Microsoft Defender and Microsoft 365 Copilot.

Mphasis' Managed Security Services, available on Microsoft Marketplace is a cybersecurity managed service framework built on AI-powered Microsoft technologies (Sentinel, Defender, Purview, Entra and Intune), designed to help enterprises proactively protect, detect, investigate, and respond to threats across their digital estate.

Leveraging Microsoft's advanced threat protection capabilities along with Mphasis' domain expertise and Agentic AI accelerators, organizations can secure endpoints, identities, data, cloud apps, and infrastructure. This combined approach empowers enterprises to strengthen cybersecurity resilience while accelerating threat detection and response.

Srikumar Ramanathan, Chief Solutions Officer, Mphasis, said, "Mphasis' inclusion in the Microsoft Intelligent Security Association reflects its deep alignment with Microsoft Security platforms and our expertise in delivering AI-driven, data-centric, and automation-first cybersecurity solutions.

"We are committed to delivering innovative cybersecurity solutions and services that protect enterprises and transform how they manage and mitigate modern-day cyber risks and enable our clients to confidently achieve their core business objectives," Ramanathan said.

Maria Thomson, Director, Microsoft Intelligent Security Association said, "The Microsoft Intelligent Security Association has grown into a vibrant ecosystem comprised of the most reliable and trusted security vendors across the globe. Our members, like Mphasis, share Microsoft's commitment to collaboration within the cybersecurity community to improve our customers' ability to predict, detect, and respond to security threats faster."

Established in 2018 to bring together Microsoft leaders, and security vendors, MISA focuses on collaborating to combat security threats and create a environment for all. Its mission is to provide security solutions that work together to help protect organizations at the speed and scale of AI in an increasing threat landscape.

IT Brief

[Mphasis joins Microsoft security partner association](#)

Mphasis has joined the Microsoft Intelligent Security Association, adding the company to Microsoft's security partner ecosystem.

The membership builds on work between Mphasis and Microsoft across managed security services, Cyber Fusion Centre services and consulting built around Microsoft security products. Those services include Microsoft Sentinel, Microsoft Entra, Microsoft Intune, Microsoft Purview, Microsoft Defender and Microsoft 365 Copilot.

Its managed security services are also available through Microsoft Marketplace. Mphasis describes the offering as a cybersecurity managed service framework based on Microsoft security technologies for threat protection, investigation and response across corporate systems.

Security focus

The announcement comes as large companies face growing pressure to manage cyber risks while rolling out artificial intelligence tools across their operations. That has increased demand for security services that cover endpoints, identities, data, cloud applications and infrastructure within a single operating model.

Microsoft created the Microsoft Intelligent Security Association in 2018 as a group of software and security services partners that integrate with its security technologies. The aim is to improve how customers identify and respond to threats by linking partner tools and services with Microsoft's own software.

Membership is also a marker of closer commercial and technical alignment with Microsoft's security stack. For Mphasis, it gives greater visibility to a cybersecurity business centred on managed services, advisory work and a cyber fusion model.

Mphasis has framed the move as part of a broader push around AI-led security operations. It said its approach combines Microsoft's threat protection tools with its own expertise and AI-based automation to help customers manage cyber risks more quickly.

Platform strategy

Security providers have increasingly tied their services to the largest cloud and software platforms, reflecting customer demand for fewer disconnected tools. Microsoft's security portfolio has become a focal point in that market because many companies already use its cloud, productivity and identity software.

That customer base makes partner ecosystems important for both sides. Service providers can use the relationship to position themselves around a widely used technology estate, while Microsoft can broaden the range of implementation and managed service options available to customers.

"Mphasis' inclusion in the Microsoft Intelligent Security Association reflects its deep alignment with Microsoft Security platforms and our expertise in delivering AI-driven, data-centric, and automation-first cybersecurity solutions. We are committed to delivering innovative cybersecurity solutions and services that protect enterprises

and transform how they manage and mitigate modern-day cyber risks and enable our clients to confidently achieve their core business objectives," said Srikumar Ramanathan, Chief Solutions Officer, Mphasis.

Industry demand

The association includes vendors and service providers that work with Microsoft on threat detection, response and governance. It is intended to support collaboration across the cybersecurity industry as attacks become more frequent and complex.

That backdrop has sharpened attention on managed security services, particularly among businesses that lack the internal resources to monitor and respond to threats around the clock. Providers in that market have increasingly built services around centralised security operations, automated workflows and platform partnerships.

For Mphasis, the development also reflects a broader strategy to deepen its role in enterprise technology operations beyond traditional IT services. Cybersecurity has become an area of investment for many outsourcing and consulting firms as clients reassess operational risk and regulatory obligations.

AI has added another layer to that shift. Companies are adopting generative AI and automation tools, but those deployments also raise questions about identity controls, data handling, monitoring and governance. As a result, security has moved higher up corporate technology budgets.

Microsoft said partners in the association share an interest in improving how customers prepare for attacks and respond to threats. "The Microsoft Intelligent Security Association has grown into a vibrant ecosystem comprised of the most reliable and trusted security vendors across the globe. Our members, like Mphasis, share Microsoft's commitment to collaboration within the cybersecurity community to improve our customers' ability to predict, detect, and respond to security threats faster," said Maria Thomson, Director, Microsoft Intelligent Security Association.

Mphasis, (BSE: 526299; NSE: MPHASIS), a global AI-led, platform-driven technology solutions provider, today announced that it has become a member of the Microsoft Intelligent Security Association (MISA), an ecosystem of software development companies and security services partners that have integrated their solutions with Microsoft Security technology to better defend their mutual customers against a world of increasing cyber threats.

This milestone builds on the collaboration between Mphasis and Microsoft through its Managed Security Services, Cyber Fusion Center (CFC) Services and Consulting and Advisory Services built around Microsoft Technologies, including Microsoft Sentinel, Microsoft Entra, Microsoft Intune, Microsoft Purview, Microsoft Defender & Microsoft 365 Copilot.

Mphasis' Managed Security Services, available on Microsoft Marketplace is a comprehensive cybersecurity managed service framework built on AI-powered Microsoft technologies (Sentinel, Defender, Purview, Entra and Intune), designed to help enterprises proactively protect, detect, investigate, and respond to threats across their digital estate. Leveraging Microsoft's advanced threat protection capabilities along with Mphasis' deep domain expertise and Agentic AI accelerators, organizations can secure endpoints, identities, data, cloud apps, and infrastructure with greater agility and intelligence. This combined approach empowers enterprises to strengthen cybersecurity resilience while accelerating threat detection and response.

"Mphasis' inclusion in the Microsoft Intelligent Security Association reflects its deep alignment with Microsoft Security platforms and our expertise in delivering AI-driven, data-centric, and automation-first cybersecurity solutions. We are committed to delivering innovative cybersecurity solutions and services that protect enterprises and transform how they manage and mitigate modern-day cyber risks and enable our clients to confidently achieve their core business objectives," said Srikumar Ramanathan, Chief Solutions Officer, Mphasis.

"The Microsoft Intelligent Security Association has grown into a vibrant ecosystem comprised of the most reliable and trusted security vendors across the globe. Our members, like Mphasis, share Microsoft's commitment to collaboration within the cybersecurity community to improve our customers' ability to predict, detect, and respond to security threats faster," said Maria Thomson, Director, Microsoft Intelligent Security Association.

Established in 2018 to bring together Microsoft leaders, & security vendors, MISA focuses on collaborating to combat security threats and create a safer environment for all. Its mission is to provide intelligent, industry-leading security solutions that work together to help protect organizations at the speed and scale of AI in an ever-increasing threat landscape.

[Mphasis Joins Microsoft Intelligent Security Association](#)

Mphasis (BSE: 526299; NSE: MPHASIS) has joined the Microsoft Intelligent Security Association (MISA), a community of security software and services firms established by Microsoft in 2018. Membership reflects that a partner's products integrate meaningfully with Microsoft Security technology, a bar that has become more significant as Microsoft's security platform has grown to span endpoint, identity, cloud, and data governance.

The Mphasis offering at the centre of the announcement is its Managed Security Services, listed on Microsoft Marketplace, which is built on Microsoft Sentinel, Defender, Entra, Intune, and Purview. Mphasis also runs a Cyber Fusion Center service and advisory practice around the same stack. The company frames both around what it calls "Agentic AI accelerators" that are intended to speed threat detection and response beyond what the underlying Microsoft tools deliver out of the box.

"Mphasis' inclusion in the Microsoft Intelligent Security Association reflects its deep alignment with Microsoft Security platforms and our expertise in delivering AI-driven, data-centric, and automation-first cybersecurity solutions," said Srikumar Ramanathan, Chief Solutions Officer at Mphasis. "We are committed to delivering innovative cybersecurity solutions and services that protect enterprises and transform how they manage and mitigate modern-day cyber risks."

For Microsoft, MISA is a way of extending the reach of its security platform through services partners who embed it into managed offerings. "The Microsoft Intelligent Security Association has grown into a vibrant ecosystem comprised of the most reliable and trusted security vendors across the globe," said Maria Thomson, Director of the Microsoft Intelligent Security Association. "Our members, like Mphasis, share Microsoft's commitment to collaboration within the cybersecurity community to improve our customers' ability to predict, detect, and respond to security threats faster."

Mphasis operates across financial services, logistics, and technology verticals and is listed on Indian exchanges. The Microsoft relationship extends what is a significant managed services business in markets including the UK and US.
