The partnership will focus on legacy modernisation, AI-led engineering and operational optimisation as Japanese enterprises accelerate digital transformation.

Mphasis, an AI-led technology solutions company, on Monday said that it has joined the Microsoft Intelligent Security Association (MISA), an ecosystem of software development companies and security partners integrated with Microsoft Security technologies.

“Mphasis' inclusion in the Microsoft Intelligent Security Association reflects its deep alignment with Microsoft Security platforms and our expertise in delivering AI-driven, data-centric and automation-first cybersecurity solutions. We are committed to delivering innovative cybersecurity solutions and services that protect enterprises and transform how they manage and mitigate modern-day cyber risks,” said Srikumar Ramanathan, Chief Solutions Officer, Mphasis.

The collaboration builds on Mphasis' managed security services, Cyber Fusion Centre services, and consulting and advisory offerings built around Microsoft technologies, including Microsoft Sentinel, Microsoft Entra, Microsoft Intune, Microsoft Purview, Microsoft Defender and Microsoft 365 Copilot.

According to the official press release, its managed security services, available on Microsoft Marketplace, combine Microsoft's AI-powered security technologies with Mphasis' cybersecurity expertise and AI accelerators to help enterprises detect, investigate and respond to cyber threats across endpoints, identities, data, cloud applications and infrastructure.

“The Microsoft Intelligent Security Association has grown into a vibrant ecosystem of trusted security vendors across the globe. Our members, like Mphasis, share Microsoft's commitment to collaboration within the cybersecurity community to improve customers' ability to predict, detect and respond to security threats faster,” said Maria Thomson, Director, Microsoft Intelligent Security Association.

Mphasis partners with TechnoPro to bring AI enterprise, cybersecurity and modernization tools to Japan; learn what the deal covers.

Mphasis has announced its collaboration with Japanese tech firm TechnoPro Holdings as the IT firm seeks to enter the Japanese market by offering its AI-powered enterprise solutions. As part of the partnership, both companies will leverage their technical expertise to help scale up client operations.

Mphasis-TechnoPro Holdings: Partnership details

Under the scope of work, the Japanese firm will introduce the Mphasis product line: Mphasis Modernize and Mphasis Optimize to clients across Japan, in a bid to allow clients to leverage the IT firm's AI capabilities, which are expected to improve business performance and the decision-making process.

The collaboration is also expected to ramp up speed and solution delivery for clients and support the creation of new value generation models. Mphasis will also utilise its cybersecurity, compliance, and security solutions for the clients of TechnoPro Holdings.

Mphasis-TechnoPro Holdings: To focus on system modernisation

Both companies will work jointly, focusing on the areas of system modernisation, business processes and decision-making, and engineering advancement through the use of AI agents.

Additionally, the Japanese tech firm will also deploy Mphasis Tria, which is expected to help accelerate software development while embedding AI into business processes like talent management, recruitment, sales, etc.

Mphasis-TechnoPro Holdings: Management commentary

Speaking on the collaboration, Nitin Rakesh, Chief Executive Officer and Managing Director of Mphasis, said, "This partnership enables us to bring our enterprise offerings to one of the world's most important industrial markets. Deploying Mphasis NeoIP and Mphasis Tria will give TechnoPro's engineers automated, AI-driven software-building environments that accelerate delivery at scale."

Also, commenting on the development, Gaku Shimaoka, President, Representative Director, and CEO of TechnoPro Holdings, said, "Through this partnership with Mphasis, we will combine this on-site and domain knowledge with world-class AI, automation, and AI-agent technologies, building a framework in which every individual engineer can use AI to implement transformation for our clients."

[Mphasis signs agreement with Japan-based TechnoPro Holdings](#)

To bring Mphasis' AI-powered enterprise offerings to the Japanese market

Mphasis announced that they have signed an agreement with TechnoPro Holdings, Japan's largest technology-focused engineering staffing and IT solutions provider, to bring Mphasis' AI-powered enterprise offerings to the Japanese market. The partnership will bring together TechnoPro Holdings' extensive engineering ecosystem with Mphasis' expertise in AI, enterprise modernization and digital transformation.

As part of this collaboration, TechnoPro Holdings will introduce Mphasis Modernize and Mphasis Optimize product lines, built on Mphasis Tria™ (Mphasis' proprietary Enterprise Agency platform) offering to clients across Japan, enabling organizations to leverage artificial intelligence that delivers a governed enterprise agency to modernize legacy environments, optimize business operations, and improve enterprise decision-making. This is expected to significantly enhance both the speed and scale of solution delivery for their clients. It also supports the creation of a new value generation model, in which challenges identified by TechnoPro engineers at client sites are addressed using AI, with the resulting knowledge and best practices subsequently scaled across other clients and industries.

The partnership will also bring Mphasis' cybersecurity, compliance, and security solutions to TechnoPro Holdings' clients, while allowing both companies to pursue opportunities across strategic industry verticals, initially focusing on financial services and manufacturing.

[Mphasis, TechnoPro Bring AI-Led Legacy Modernization Push to Japan](#)

Mphasis and TechnoPro will take Tria-based modernization, optimization and AI-agent capabilities to Japanese enterprises, initially targeting financial services and manufacturing.

Mphasis has signed a strategic agreement with Japan-based TechnoPro Holdings to take its AI-led enterprise modernization and optimization offerings to the Japanese market.

Under the agreement, TechnoPro will introduce Mphasis Modernize and Mphasis Optimize to clients across Japan. Both offerings are built on Mphasis Tria, which the IT services company describes as its Enterprise Agency Platform for combining enterprise knowledge, AI-driven decision-making and agentic execution.

The companies will initially focus on opportunities across financial services and manufacturing, while also taking Mphasis' cybersecurity, compliance and security capabilities to TechnoPro customers.

From Legacy Modernization to AI-Led Operations

The partnership covers three broad areas.

For system modernization, the companies will use Mphasis Modernize to support legacy-system renewal and software-development transformation.

Mphasis Optimize will be used for AI-led operational efficiency, decision support and business-process optimization.

The third area involves bringing AI agents more directly into software engineering. Using Mphasis NeoIP and Tria, TechnoPro plans to build development environments in which its engineers can work alongside AI agents.

The companies also intend to create a model where challenges identified by TechnoPro engineers at customer sites can be addressed using AI, with successful approaches subsequently adapted for other customers and industries.

TechnoPro to Deploy Tria Internally

The agreement goes beyond taking Mphasis products to TechnoPro customers.

TechnoPro also plans to deploy Mphasis Tria across parts of its own operations, including software development. The companies said the platform could support autonomous code generation and testing while introducing AI into functions such as talent allocation, recruitment, sales matching and corporate planning.

TechnoPro intends to use its own operations as a large-scale deployment environment, with validated workflows potentially packaged into industry-specific solutions for sectors including automotive and manufacturing.

The underlying Mphasis technology stack includes NeoIP and Ontosphere, its knowledge platform for connecting enterprise information with AI-assisted implementation and multi-agent orchestration.

Mphasis launched Tria in May 2026 along with the Modernize and Optimize product lines as part of a broader move to package its AI capabilities into repeatable enterprise transformation offerings.

Japan Becomes a Strategic AI Market

The companies are positioning the agreement against a broader technology modernization challenge facing Japanese enterprises: ageing legacy environments, shortages of skilled technology talent and pressure to improve productivity through automation and AI.

For Mphasis, the partnership provides a route into Japanese enterprises through TechnoPro's engineering presence and customer relationships, particularly across manufacturing, automotive and technology.

“Japan represents a significant growth opportunity as enterprises accelerate digital transformation and AI adoption,” said Nitin Rakesh, CEO and Managing Director, Mphasis.

He said combining Mphasis' AI platforms with TechnoPro's presence across Japanese industries would allow the company to expand its enterprise offerings in the market.

Gaku Shimaoka, President, Representative Director and CEO of TechnoPro Holdings, said the company's approximately 30,000 engineers and researchers provide it with visibility into customer challenges across development, manufacturing and IT operations.

Through the Mphasis partnership, TechnoPro wants to combine this domain knowledge with AI, automation and agent technologies, with the objective of extending what individual engineers can deliver for customers.

The agreement also reflects Mphasis' broader attempt to move its enterprise AI strategy beyond standalone pilots and into modernization, engineering and operational workflows where AI-led improvements can be deployed at scale.

[Mphasis shares in focus on TechnoPro tie-up to expand AI offerings in Japan](#)

Mphasis share price: Under the agreement, TechnoPro Holdings will introduce Mphasis Modernize and Mphasis Optimize, built on Mphasis Tria, Mphasis' Enterprise Agency platform, to clients across Japan.

Shares of Mphasis Ltd are in focus on Wednesday after the IT firm signed an agreement with TechnoPro Holdings, Japan's largest technology-focused engineering staffing and IT solutions provider, to bring its AI-powered enterprise offerings to the Japanese market.

Under the agreement, TechnoPro Holdings will introduce Mphasis Modernize and Mphasis Optimize, built on Mphasis Tria, Mphasis' Enterprise Agency platform, to clients across Japan. The offerings will help companies modernise legacy systems, improve business operations and support decision-making using artificial intelligence.

The partnership will also bring Mphasis' cybersecurity, compliance and security solutions to TechnoPro Holdings' clients. The companies will initially focus on financial services and manufacturing, while also exploring opportunities across other industry verticals.

Mphasis shares settled at Rs 2,509 on Tuesday. The scrip is down 11.30 per cent year-to-date.

The companies will work together on system modernisation, AI-based business process and decision-making improvements, and AI-agent-enabled software development. TechnoPro's engineers will use Mphasis Tria and Mphasis NeoIP to work alongside AI agents in software development and operations.

TechnoPro Holdings will also deploy Mphasis Tria internally to create AI-powered software development environments for its workforce. The platform will be used for code generation and testing, as well as functions such as talent allocation, recruitment, sales matching and corporate planning.

TechnoPro will use its own operations as a large-scale AI deployment environment, with workflows subsequently developed into industry-specific AI solutions for customers, particularly in the automotive and manufacturing sectors

"Leveraging Mphasis' specialized AI platform will accelerate software development through autonomous code generation and testing, while embedding AI into core business functions including talent allocation, recruitment, sales matching and corporate planning. TechnoPro Holdings will also use its own operations as a large-scale AI deployment environment, with proven workflows subsequently packaged into industry-specific AI solutions for customers across automotive and manufacturing sectors," Mphasis said.

The partnership comes as Japanese companies accelerate technology modernisation and AI adoption amid ageing technology infrastructure, talent shortages and rising business complexity.
