

Decreasing Operating Expenditure for a Large Mining Company in Brazil

The Client

The client is a large mining company based out of Brazil. Client's datacenter estate spreads across the US that incurred high operating expenses.

Business Objective

The client suffered high operating expenses due to its remote datacenter management requisites. The infrastructure's server setups were non-standard and complex, which made server management a difficult task.

How Mphasis Helped

Mphasis charted a phased approach for data center consolidation and new server builds. As part of the solution, Mphasis also performed server pooling based on the client's environment specifications for OS image creation.

After the engagement, the client experienced enhanced business development, improved operations and energy efficiency of devices and reduced server build costs.

About Mphasis

Mphasis is a global Technology Services and Solutions company specializing in the areas of Digital and Governance, Risk & Compliance. Our solution focus and superior human capital propels our partnership with large enterprise customers in their Digital Transformation journeys and with global financial institutions in the conception and execution of their Governance, Risk and Compliance Strategies.
