

Middleware Upgrade for a Large Financial Services Company in the US

The Client

The client is a large financial services company based out of the US. The client's large infrastructure heavily relied on legacy systems and multiple vendors.

Business Objective

The client's infrastructure and business were unable to utilize advanced features enabled by modern technologies. Dependency on legacy systems meant high hardware and OEM vendor support costs. Due to the size of the infrastructure, end-of-life and vendor support were difficult to manage. Utilization of various applications also meant difficulties managing access control.

Solution

Mphasis performed a thorough assessment of the existing environment and executed an error-free migration. The solution involved deployment of automation artefacts that reduced migration time. Customized scripts were used to eliminate platform specific dependencies and created parallel, fallback environments to reduce downtime.

After the engagement, application response time was increased by 40% and the overall implementation time was reduced by 33%.

About Mphasis

Mphasis is a global Technology Services and Solutions company specializing in the areas of Digital and Governance, Risk & Compliance. Our solution focus and superior human capital propels our partnership with large enterprise customers in their Digital Transformation journeys and with global financial institutions in the conception and execution of their Governance, Risk and Compliance Strategies. We focus on next generation technologies for differentiated solutions delivering optimized operations for clients.
